Additional Remarks	<ol style="list-style-type: none"> 1. It is recommended that user install the over voltage protection, under voltage protection and surge protection devices in the power supply circuits of light fixtures to ensure electricity safety. 2. The LED driver used in combination with the end device is one of the accessories of the whole light fixture, and the EMC of the whole light fixture is not only susceptible to the driver itself, but to the LED light fixture and the whole light fixture's wiring. Thus, the manufacturer of LED light fixture should re-confirm the EMC of the whole light fixture before the whole light fixture is finished. 3. The test conditions of the circuit breaker configuration quantity are the same as those of the inrush current. 4. Lifud reserves the right to interpret any of the above parameters.

■ Dimming Operation Instructions

PUSH Dimming Operations

Operation	Duration	Function
Instant Push	0.1-0.5 sec	LED light on/off
Long Push	0.6-9 sec	Dim up/down
Reset Push	>9 sec	Reset to 50% brightness

■ Dimming Operation Instructions

PUSH Dimming Operations

The PUSH operation won't cause any variations if it's less than 0.1 sec.

- Connect the PUSH switch in series between AC-L and DA1 terminals; short circuit AC-N and DA2 terminals;
- Minimum dimming depth of PUSH dimming: 1% (Iout);
- The PUSH dimming mode has the memory function in case of any power failure. Power on the driver again and the light will return to the state before the power failure;
- Maximum wire length between the PUSH switch and the farthest LED driver: 135m; wire diameter: 12-24AWG
- Default setting: DALI mode; when switching to PUSH mode, long press the PUSH button for 3 sec.

DALI Dimming Operations

- Default setting: 100% brightness
- Connect DALI signal to DA1 PUSH and DA2 PUSH terminals.
- DALI protocol includes 16 groups and 64 IP addresses.
- Maximum quantity of LED drivers connected in parallel in DALI dimming mode: 64 pcs
- Minimum dimming depth of DALI dimming: 0.1% (Iout&Vout max).
